Correspondence with Daniel Bernoulli

Series: Commercium epistolicum, Volume 4A / 3

- ▶ **Comprises the complete edition of one of Leonhard Euler's most extensive and substantial correspondences, complemented by many hitherto unpublished letters from both correspondents' entourage**
- ▶ **Provides valuable information on the biographies of two great scientists, the genesis and publication of many of their works, the prize competitions of the academies at Paris and Berlin dealing with questions of physics and astronomy, and the history of the Petersburg Academy in its first fifty years**
- ▶ **Presents an ample documentation collecting hard-to-find biographic and bibliographic details**

In 1727 Leonhard Euler, at the age of twenty, joined the recently founded Imperial Russian Academy of Sciences; his appointment had been negotiated by his teacher Johann I Bernoulli at Basel and Johann's son Daniel (1700–1782), who already worked at St. Petersburg. Euler's correspondence with Daniel Bernoulli intensified when Bernoulli returned to Basel in 1733 and was continued after Euler's move to Berlin in 1741. In the context of the publication of Johann Bernoulli's *Hydraulics* (1742) and a prize competition of the Berlin Academy in 1746 tension arose between the two; from 1750 to 1767 only few letters were exchanged, most of them by Daniel's brother Johann II and nephew Johann III acting as intermediaries. After Euler's return to Russia and the re-establishment of Daniel Bernoulli's membership in the Petersburg Academy that he mediated, the correspondence was resumed, now increasingly through Euler's son Johann Albrecht and his Basel-born assistant Niklaus Fuss.

The 191 letters of these correspondences and some related documents – including Daniel Bernoulli's short autobiography from 1776 – are being edited here, partly for the first time: with German translations of many pieces, commentaries on the physical and astronomical topics addressed in the letters, and extensive indices.

The volume offers important insights into the biographies of two great scientists and into the academic life of their time.
